Here is a list of resources available to our High School faculty:

EDUSS System

The EDUSS system will replace Study Island with a rich array of software solutions for assessment and teaching mathematics, reading and phonics

Eduss Mathematics

The Eduss Mathematics system combines world-first educational software features which test and evaluate children, show problem areas, automatically set individual learning schedules, and provide step-by-step teaching and detailed summary reports.

Eduss English

The Eduss English system combines world-first educational software features which test and evaluate children, show problem areas, automatically set individual learning schedules, and provide step-by-step teaching and detailed summary reports.

Eduss Phonics

The Eduss Coded Phonics system eliminates weak areas that existed in the old method of teaching phonics. The system simplifies English, making it into a phonetic language by using a special color-coding system, which accelerates the child's ability to pronounce and read all words.
