Virtual teachers help fix school results

A TECHNOLOGY SOLUTION HAS BEEN FOUND TO THE GROWING
CLASS-SIZE PROBLEM IN AUSTRALIAN SCHOOLS

Students, teachers and parents participate in an on-line 'home-work network' that has taken the guess-work out of providing students with the personalised help they need and ensures that each student gets exactly the right assistance, day by day.

So targeted is Eduss Trek – it is estimated to deliver the equivalent of 5 teachers to each class of 30 or so students – instead of just one.

Eduss Trek is the first school-interactive system in the world to chart the progress of each student through the official local education syllabus. It covers both primary and secondary school years in Mathematics and English. In each case the path to success begins with identifying each individual student's precise level of knowledge relative to the syllabus.

Eduss Trek then delivers individually tailored information toolkits that allow

students to be led past personal obstacles, building bridges in their understanding, to reach the most direct path to education success.

The Eduss Trek system works as an extension of each local school and the work underway in the classroom. It accurately pin-points a student's day by day progress, providing guidance which builds understanding, each step of the way.

Schools are quickly embracing the Eduss Trek system and are encouraging parents to bring the Eduss Trek 'pipe' into their homes to provide the most effective possible link between parents, students and their school. All that is required at home after school is a home computer linked to the internet – and school-supplied software costing each family \$375.

Eduss Trek has begun to deliver outstanding results at exam and assessment time because it effectively gives teachers extensive 'one-on-one' time with each student – even within normal

class sizes. The system therefore provides invaluable support to teachers, students and parents coping with the realities of present-day education.

The important direct benefit to both student and teacher is that quality time in the classroom can remain squarely focussed on positive person-to-person interaction. Thus – the Eduss Trek system frees up teachers to teach and students to listen, look and learn – making the experience of a solid school-based education a great deal more rewarding for all.

The exam results and testimonials of students, teachers and parents using the unique Eduss Trek system speak for themselves.
